

The Minidiff Plus - Diffuse Reflectance Accessory for FT-IR Spectroscopy

The Minidiff Plus diffuse reflectance accessory is designed for routine sampling. High performance solids analysis is made simple through the optimised zero alignment optics and Benchmark™ base-plate mounting system. Sampling versatility is maintained through the choice of either standard solids cup or Diabrase™ abrasive sampling pads. Up to 3 samples can be loaded at the same time, while the sample introduction system reduces the risk of sample spillage.

Features:

- Zero Alignment: Completely pre-aligned with simple sample introduction/removal.
- Optimised Throughput: designed for a high throughput on all FT-IR spectrometers
- Maximum Versatility: both sample cups for powders and 'Diabrase' sampler for non particulate solid samples.
- Budget Cost: Cost engineered to meet the budget of all laboratories.
